

4 - 7 cells Li-ion/polymer battery protection IC

# MM3877 series

## Outline

The MM3877 series are protection IC using high voltage CMOS process for overcharge, overdischarge, overcurrent, temperature protection, and cell balance control of the rechargeable Lithium-ion or Lithium-polymer battery. The overcharge, overdischarge, discharging overcurrent, charging overcurrent, and short of the rechargeable 4-7cells lithium-ion or lithium-polymer battery can detected. In addition, the temperature detection by external NTC thermistor and cell balance control are also possible. The internal circuit of IC is composed by the voltage detector, the reference voltage source, oscillator, counter circuit and the logical circuit, etc. A stacking configuration using multiple ICs is also possible, so a low-cost, space-saving protection circuit can be configured for applications with more than 7 cells.

## Features

(Unless otherwise specified,Ta=25°C)

### 1) Range and accuracy of detection/release voltage

|  |                           |                |
|--|---------------------------|----------------|
| • Overcharge detection voltage                 | 3.6V to 4.5V, 5mV steps   | Accuracy±20mV  |
| • Overcharge release voltage                   | 3.4V to 4.5V, 50mV steps  | Accuracy±30mV  |
| • Overdischarge detection voltage              | 2.0V to 3.0V, 50mV steps  | Accuracy±50mV  |
| • Overdischarge release voltage                | 2.0V to 3.5V, 50mV steps  | Accuracy±100mV |
| • Cell balance detection voltage               | 3.6V to 4.5V, 50mV steps  | Accuracy±25mV  |
| • Discharging overcurrent detection voltage1   | 30mV to 300mV, 5mV steps  | Accuracy±10%   |
| • Discharging overcurrent detection voltage2   | 60mV to 600mV, 5mV steps  | Accuracy±15%   |
| • Short detection voltage                      | 0.2V to 1.0V, 0.05V steps | Accuracy±20%   |
| • Charging overcurrent detection voltage       | -300mV to -20mV, 5mV step | Accuracy±10%   |
| • Temperature protection detection temperature | -40°C to 75°C , 5°C step  | Accuracy±5°C   |

### 2) Range of detection delay time

|   |                             |
|---|-----------------------------|
| • Overcharge detection delay time               | 100ms to 2.048s             |
| • Overdischarge detection delay time            | 100ms to 2.048s             |
| • Cell balance detection delay time             | 100ms to 4.096s             |
| • Discharging overcurrent detection delay time1 | 100ms to 2560ms, COC=0.01uF |
| • Discharging overcurrent detection delay time2 | 10ms to 640ms, COC=0.01uF   |
| • Short detection delay time                    | 200us to 500us, 50us step   |
| • Charging overcurrent detection delay time     | 4ms to 2.048s               |
| • Temperature protection detection delay time   | 4ms to 2.048s               |

※ Voltage monitoring of overcharge protection, overdischarge protection and cell balance control measures the voltage of each cell in turn at [Cell voltage monitoring period( =Typ.71.75ms)]. For that reason, each detection time and release time fluctuates within the range of Spec depending on the difference between the timing at which the voltage changes and the timing at which the voltage changes and the timing at which the voltage is monitored.

### 3) 0V battery charge function

Selection from "Prohibition" or "Permission"

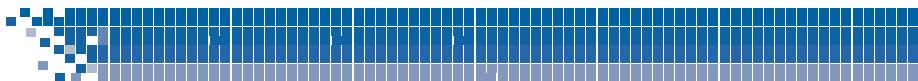

- 4) SEL pin can be set from 4cell protection to 7 cell protection.
- 5) Power save function
- 6) Cascade connection
- 7) Low current consumption
  - Ave. current consumption (Normal mode) Typ. 20.0uA Max. 30.0uA (VCELL=3.5V)
  - Current consumption (power save mode) Typ. 1.0uA Max. 1.5uA (VCELL=1.8V)
- 8) Package type
  - VSOP-20A 8.66 × 6.00 × 1.63 [mm]

### Pin explanations

| VSOP-20A | Pin No. | Symbol | Function   |
|----------|---------|--------|--|
|          | 1       | VDD    | The input pin of the power supply of IC.   |
|          | 2       | V7     | The input pin of the positive voltage of V7 cell and the output pin of cell balance control of V7 cell.  |
|          | 3       | V6     | The input pin of the positive voltage of V6, and the negative voltage of V7 cell. And the output pin of cell balance control of V6 cell.   |
|          | 4       | V5     | The input pin of the positive voltage of V5, and the negative voltage of V6 cell. And the output pin of cell balance control of V5 cell.   |
|          | 5       | V4     | The input pin of the positive voltage of V4, and the negative voltage of V5 cell. And the output pin of cell balance control of V4 cell.   |
|          | 6       | V3     | The input pin of the positive voltage of V3, and the negative voltage of V4 cell. And the output pin of cell balance control of V3 cell.   |
|          | 7       | V2     | The input pin of the positive voltage of V2, and the negative voltage of V3 cell. And the output pin of cell balance control of V2 cell.   |
|          | 8       | V1     | The input pin of the positive voltage of V1, and the negative voltage of V2 cell. And the output pin of cell balance control of V1 cell.   |
|          | 9       | SEL    | This input pin is changing function for 4cell, 5cell, 6cell, and 7cell in series.  |
|          | 10      | PD     | The output pin for controlling pull-down of load negative voltage.   |
|          | 11      | COC    | This input pin sets delay time of discharging overcurrent detection, and selects mode.   |
|          | 12      | VSS    | The input pin of the negative voltage of V1 cell. The input pin the ground of IC.  |
|          | 13      | TH     | Temperature detection pin.   |
|          | 14      | CS     | Temperature detection pin..  |
|          | 15      | DCHG   | When charge/discharge control FET drive mode, DCHG pin is discharge control output pin. When cascade mode, DCHG pin is discharge control output pin and load connect signal input pin. |
|          | 16      | VLM    | The input pin connected to load negative voltage.  |
|          | 17      | OV     | When charge/discharge control FET drive mode, OV pin is charge control output pin. When cascade mode, OV pin is charge control output pin and charger connect signal input pin.        |
|          | 18      | VCM    | The input pin connected to charger negative voltage.   |
|          | 19      | SOC    | The input pin for charge control. And, charger connect signal output pin.  |
|          | 20      | SDC    | The input pin for discharge control. And, load connect signal output pin.  |

## Absolute Maximum Ratings

| Parameter   | Symbol        | Min       | Max       | Unit |
|---|---------------|-----------|-----------|------|
| VDD pin supply voltage                                    | $V_{VDDMAX}$  | -0.3      | 42        | V    |
| Voltage between the input terminals of voltage of battery | $V_{cellMAX}$ | -0.3      | 6         | V    |
| VCM pin supply voltage                                    | $V_{VCMMAX}$  | $VDD-42$  | $VDD+0.3$ | V    |
| VLM pin supply voltage                                    | $V_{VLMMAX}$  | $VDD-42$  | $VDD+0.3$ | V    |
| OV pin supply voltage                                     | $V_{OVMAX}$   | $VDD-42$  | $VDD+0.3$ | V    |
| DCHG pin supply voltage                                   | $V_{DCHGMAX}$ | $VDD-42$  | $VDD+0.3$ | V    |
| CS pin supply voltage                                     | $V_{CSMAX}$   | $VSS-0.3$ | $VDD+0.3$ | V    |
| Storage temperature                                       | $T_{STG}$     | -55       | 125       | °C   |

## Recommended Operating Conditions

| Parameter                     | Symbol    | Min | Max  | Unit |
|-------------------------------|-----------|-----|------|------|
| Operating ambient temperature | $T_{OPR}$ | -40 | 85   | °C   |
| Operating voltage             | $V_{OPR}$ | 3.5 | 31.5 | V    |

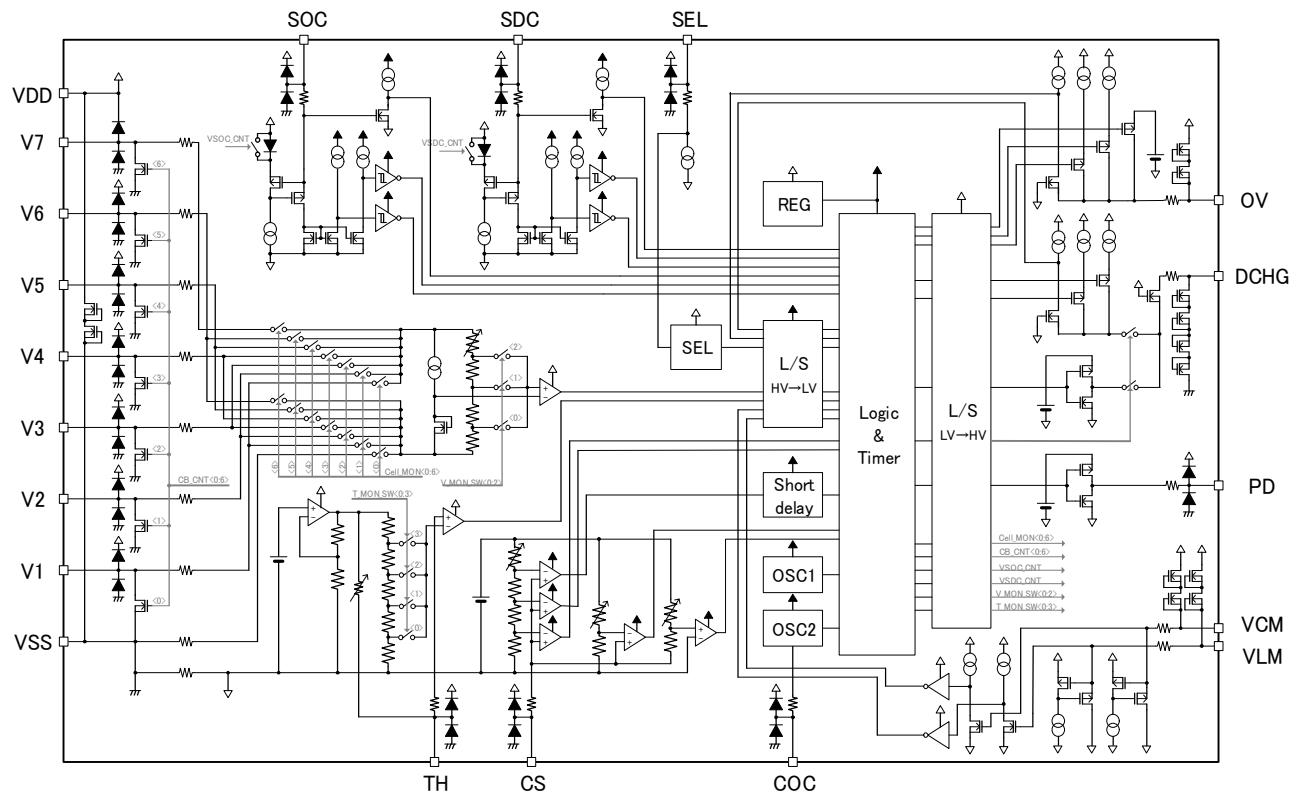

## Electrical characteristics

(特記なき場合、Ta=25°C)

| Parameter   | Symbol      | Note            | Min       | Typ         | Max       | Unit |
