

# Protection for Lithium-Ion Batteries (3-serial cells) Monolithic IC MM3113 Series

## Outline

This IC integrates overcharge/overdischarge protection functions for lithium-ion/lithium polymer rechargeable batteries and the regulator functions into one chip by high voltage CMOS process. It can be used with other gas gauge IC, security IC, etc. as it includes a regulator. Overcharge/overdischarge can be detected to protect 3-cell lithium-ion/lithium polymer batteries. Charge/discharge control is performed using two external Pch MOS FETs.
