

Composite regulator with ON/OFF Monolithic IC MM1516

Outline

This IC was developed as a compound power supply and is composed of 3 positive voltage regulator circuits. Regulator output voltage is fixed, and A ranks are set at 2.5V typ. 2.8V typ. and 3.0V typ. Switch pins are provided to control each output. This IC is ideal for use in cellular telephones and the like.

Features

- | | | | |
|------------------------------------|--------------------------------------|--------------------------------|-------------------------------|
| 1. Input/output voltage difference | V_{o1} : 0.25V typ. | V_{o2} : 0.28V typ. | V_{o3} : 0.30V typ. |
| 2. Output noise voltage | V_{o1} : 60 μ Vrms typ. | V_{o2} : 60 μ Vrms typ. | V_{o3} : 60 μ Vrms typ. |
| 3. Output voltage precision | V_{o1}, V_{o2}, V_{o3} : $\pm 3\%$ | | |
| 4. No-load input current | V_{o1} : 250 μ A typ. | V_{o2}, V_{o3} : 500 μ A | |
| 5. Input voltage | 12V max. | | |
| 6. Maximum output current | I_{o1} : 100mA max. | I_{o2} : 100mA max. | I_{o3} : 150mA max. |
| 7. Output ON/OFF control | High: ON, Low: OFF | | |

Package

VSOP-8B

Applications

1. Cellular telephones, PHS
2. Video cameras
3. Portable communications equipment
4. Battery-powered portable equipment
