

Variable Gain Amplifier (built-in Y LPF, C BPF) Monolithic IC MM1304

December 6, 1994

Outline

This IC is a variable gain amp for video with built-in luminance low-pass filter and chroma band-pass filter. It was developed as a post-filter followed by a D/A converter.

The sampling frequencies for the D/A converter are assumed to be 14.3MHz for chroma, and 14.3MHz and 9.5MHz for luminance.

Features

1. Luminance LPF cutoff frequency can be selected and set at 5.4MHz and 4.4MHz. When set at 5.4MHz, use in models that support S, and in normal models when set at 4.4MHz.
2. Chroma BPF center frequency can be selected and set at 3.58MHz (NTSC) and 4.4MHz (PAL).
3. Luminance variable gain range $-6\sim+6\text{dB}$
Chroma variable gain range $-3\sim+9\text{dB}$ and $\sim 1\sim 13\text{dB}$
4. Operating supply voltage $4.5\sim 5.5\text{V}$
5. Luminance S/N (unweight) $10\text{kHz}\sim 4.2\text{MHz}: 47\text{dB typ.}$

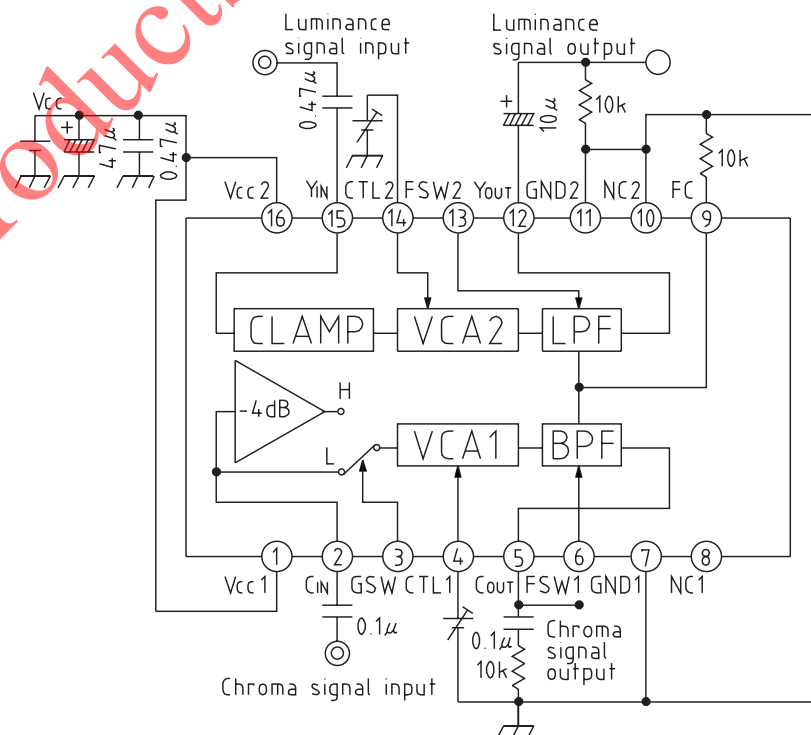

Package

SSOP-16A (MM1304XJ)

Applications

1. VCRs with camera
2. Other video equipment

Equivalent Circuit Diagram

Pin Description

Pin no.	Pin name	Equivalent Circuit Diagram	Function
1	Vcc1		C power supply pin
2	CIN		Chroma signal input.
3	GSW		C gain switching pin. Set at 7dB standard for low, and 3dB standard for high.
4	CTL1		C gain control pin.
5	Cout		Chroma signal output pin.
6	FSW1		C BPF frequency switching pin. Set at 3.58MHz BPF for high, and 4.43MHz BPF for low.
7	GND1		C GND
8	NC1		NC pin

9	FC		Pin for adjusting LPF and BPF frequency response. Connect 10kΩ between this pin and ground.
10	NC2		NC pin
11	GND2		Y GND
12	Yout		Y output pin
13	FSW2		Y LPF frequency switching pin. Set at 4.4MHz LPF for high, and 5.4MHz LPF for low.
14	CTL2		Y gain control pin.
15	YIN		Luminance signal input pin.
16	Vcc2		Y power supply pin.

Measuring Circuit

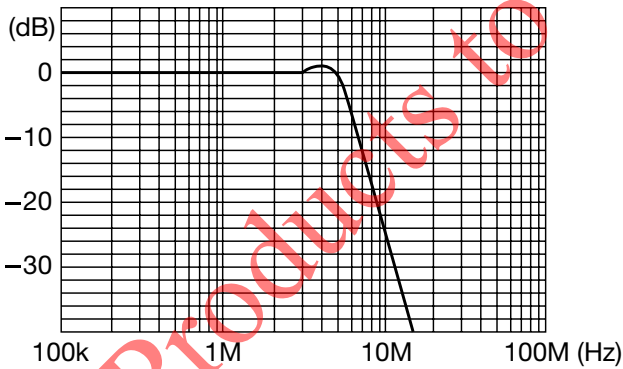

- *1 Design so that , to the extent possible, Y_{OUT} pin and FC pin are not capacitance coupled. Filter frequency response may be affected.
- *2 Connect NC2 pin to ground.
- *3 Use component with ±1% precision.
