

# Video Signal Driver for DVD Players

## Monolithic IC MM1567

July 10, 2002

### Outline

This IC is a video signal driver IC that supports 6-ch interlace video developed for DVD players. It includes a low-pass filter that attenuates the noise element during DA conversion, and a 3-channel 6dB amp with 75Ω driver.

In addition, external ESD protection diodes can be reduced by a sag correction pin for reducing output coupling capacitance, and enhancement of the ESD protection element for the output pins.

### Features

1. Includes a SAG correction pin
2. Enabled to drive a 3-channel 6dB amp with 75Ω driver
3. Includes a 4th-order low-pass filter  
Frequency response: 6.75MHz ± 1dB / 27MHz - 27dB min.
4. Includes a 6dB amp
5. Includes a power save function
6. S/N=80dB typ. (Y/C mix:74dB typ.)
7. ESD strength (aerial discharge) of ±15kV (IEC standard)
8. The component circuitry can support RGB signals with the control pin.

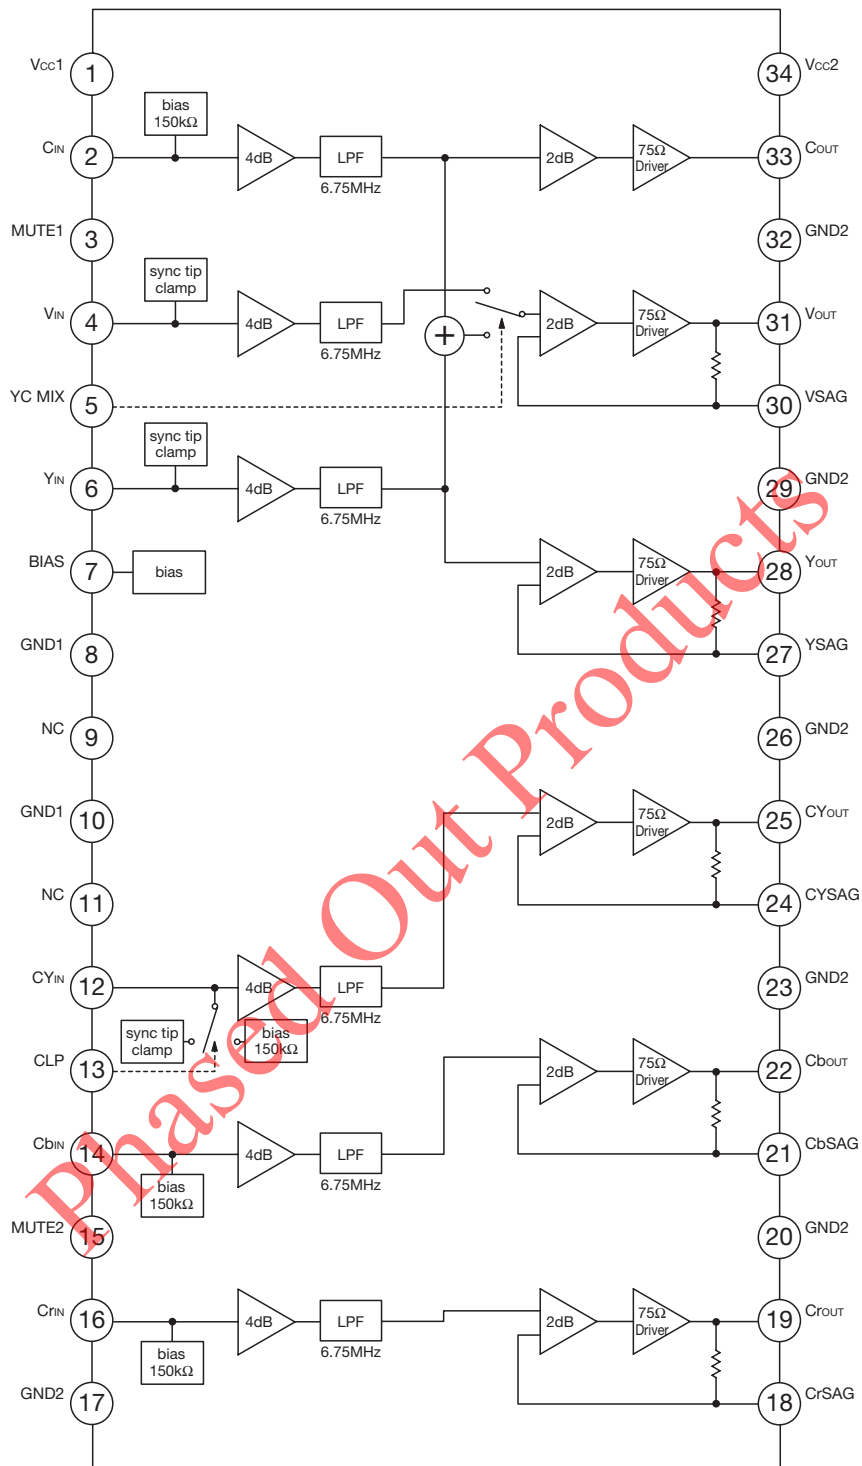

### Package

SSOP-34A

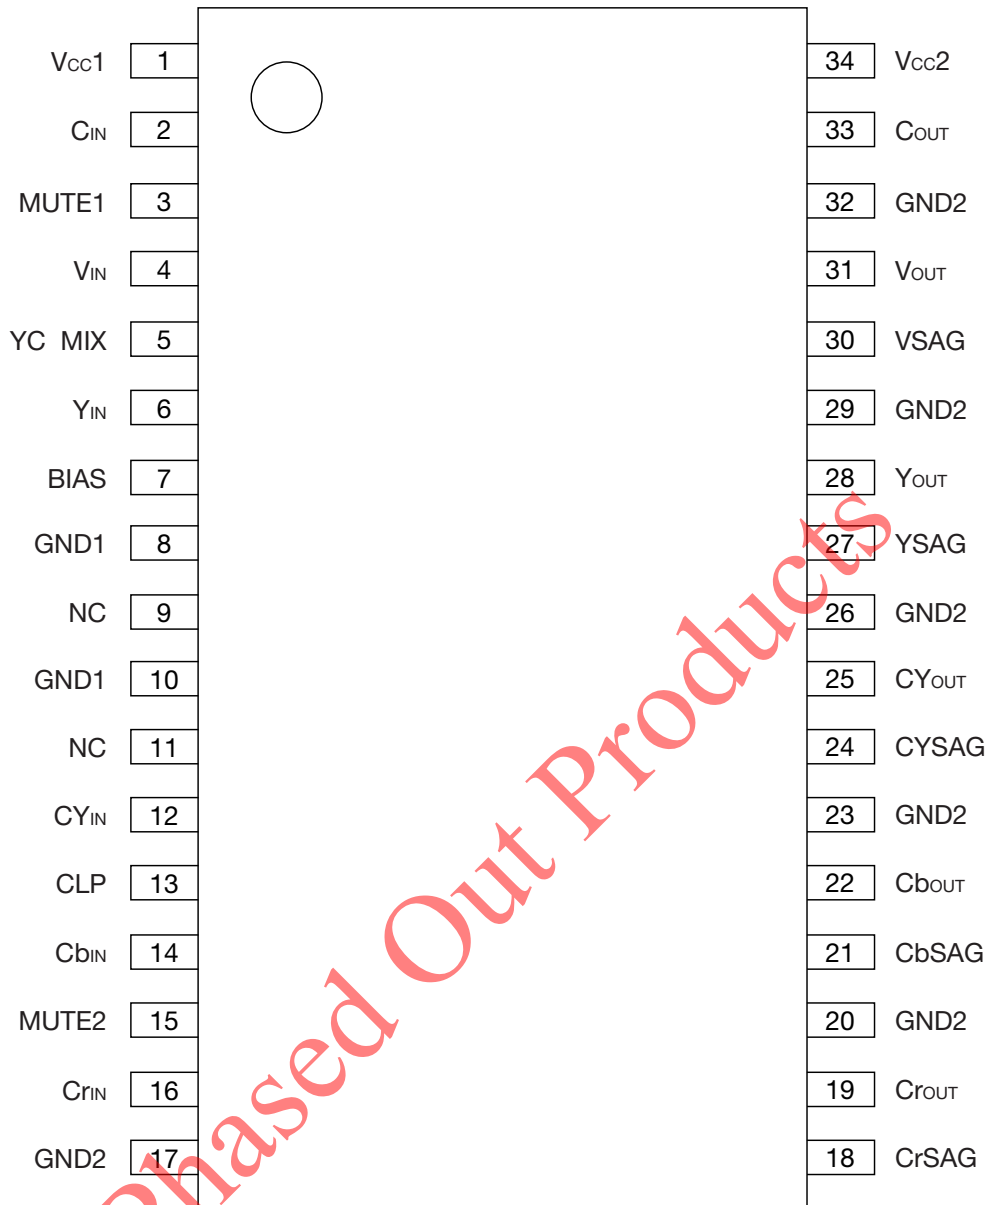

### Applications

1. DVD players
2. Digital STB
3. Other digital video equipment
