

# Monitoring system for pressure measuring data

2023/03/22

## Features

- Construct the measurement data monitoring system from up to 4 units of voltage output type pressure sensors with the communication by WiFi.
- Monitoring function, Calibration function at zero and span, Reading out and change of setting, Detecting function and Energizing stability evaluation function can be used by starting the special application software with PC on the host side.
- The physical value conversion is calibrated by the filter to the Digital data.
- Digital filter, Stabilization filter, Zero set, Zero clear, Comparator, Abnormality detection, Maintenance
